CAREER OBJECTIVE

Computer Science undergraduate specializing in Data Science with strong interests in Data Analysis, Data Engineering, and Machine Learning. Experienced in data processing, ETL workflows, predictive modeling, and analytics. Passionate about transforming data into actionable insights and building scalable data-driven solutions using modern cloud and big data technologies.

EDUCATION

Faculty of Computing and Technology, University of Kelaniya *2023 – Present*

BSc (Hons) in Computer Science (Specialization: Data Science)

Current GPA: 3.62 / 4.00

ICBT Galle Campus *2022 – 2023*

Diploma in ICT & English

G.C.E Advanced Level (Physical Science Stream) *Completed 2021*

Physics - B Chemistry - B Combined Mathematics - A

PROJECTS

Loan Default Risk Approval Prediction System  *2026*

- Technologies: Python, LightGBM, SHAP, Scikit-learn, Flask
 - Developed LightGBM classification and regression models to predict loan approval decisions and risk scores.
 - Improved model performance through preprocessing, feature engineering, and hyperparameter tuning.
 - Applied SHAP for explainable AI and feature importance analysis.
 - Built a Flask web application for real-time prediction and user interaction.

End-to-End Azure Data Engineering Pipeline  *2026*

- Technologies: Azure Data Factory, Azure SQL, Databricks, PySpark
 - Designed and implemented a scalable data pipeline with automated data ingestion into Azure SQL.
 - Structured data processing using Medallion Architecture (Bronze and Silver layers).
 - Performed data transformation and processing using PySpark in Databricks.

Finance Lakehouse Data Engineering Project  *2026*

- Technologies: Databricks, Apache Spark, PySpark, Delta Lake, SQL, GitHub
 - Built an end-to-end Lakehouse data platform using synthetic financial transaction datasets.
 - Implemented Bronze, Silver, and Gold layers using Delta Lake.

- Developed PySpark ETL pipelines for ingestion, transformation, fraud detection, and KPI generation.
- Created analytics dashboards to monitor revenue, customer behavior, transaction trends, and fraud risks.

AI-Based Crypto & Forex Signal Generator 🔗

2026

Technologies: Python, Flask, React, Pandas, Scikit-learn

- Developed a full-stack application for generating real-time trading signals using RSI, EMA, MACD, and machine learning models.
- Built backend APIs using Flask and developed an interactive frontend using React.
- Collaborated in a two-member team, contributing to both frontend and backend development.

HallEase – Event & Hall Management System 🔗

2025

Technologies: TypeScript, Next.js, Tailwind CSS, Supabase

- Developed a web-based system for hall booking, scheduling, and administrative management.
- Improved booking efficiency and reduced scheduling conflicts.

Netflix Movies & TV Shows Data Analysis 🔗

2026

Technologies: SQL, Power BI

- Analyzed Netflix datasets to identify trends, genre distribution, and content patterns.
- Built Power BI dashboards to visualize KPIs and business insights.

TECHNICAL SKILLS

Programming Languages	Python, R, JavaScript, C, C++
Data Analysis & ML	Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, Streamlit
Data Engineering	ETL Pipelines, Azure Data Factory, Azure Databricks, PySpark
Web Development	React, Flask, HTML, CSS
Databases	MySQL, PostgreSQL, Azure SQL, Supabase, PL/SQL
Cloud & Tools	Azure, AWS (Basic), Git, GitHub, Jupyter Notebook, Power BI

CERTIFICATIONS

- Azure Fundamentals Course for Beginners – ScholarHat
- Machine Learning with Python – ScholarHat
- AWS AI Practitioner Challenge – Udacity
- Power BI for Beginners – Simplilearn
- SQL Server Foundations Course – ScholarHat
- Python 101 for Data Science – Cognitive Class
- AWS Certified Machine Learning Engineer – Associate (In Progress)

SOFT SKILLS

Analytical Thinking Problem Solving Communication Adaptability Cross-Functional Collaboration
